### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Linda M. Scuorzo on 09/05/03.

The application has been amended as follows:

In claim 1, line 5, delete "in an essentially non-aqueous environment" and insert therefor --contained within said petroleum stream--.

In claim 3, line 1, delete "or 2".

Claim 2 has been canceled.

2. The following is an examiner's statement of reasons for allowance: The above examiners amendment was needed for two main reasons.

The first reason is that applicant's newly added claim limitation of: "in an essentially non-aqueous environment" is deemed to be new matter since section [0011] of the specification referred to by applicant's representative in the

Art Unit: 1714

Remarks section of the latest amendment does not support such a limitation for the way the phosphorous acid is contacted with the corrosion prone metal surface. The examiner draws applicant's attention to section [0014] of the specification, which only supports adding the phosphorous acid to the organic acid containing petroleum stream itself, or adding it to a low-acid petroleum feed which is contacted with the corrosion prone metal surface prior to the corrosion prone metal surface being contacted with the corrosive organic-acid containing petroleum stream.

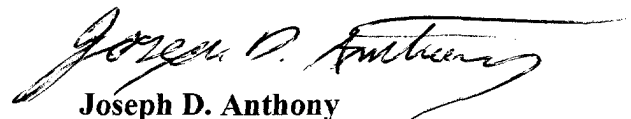

The second reason for the above examiner's amendment was to overcome the applied prior-art rejections. The examiner holds that the applied prior-art references did not directly disclose that their antifouling methods reduce the corrosion of metal equipment surfaces from organic acid containing petroleum streams. Furthermore, the examiner holds that the petroleum streams disclosed by the applied prior-art do not inherently contain organic-acid(s). As such, it would have been unobvious to use the applied prior-art references as motivation to perform applicant's claimed method.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
